**Rediscovering Geography** - Rediscovering Geography Committee - 1997-04-11

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents

**Mapping the Cold War** - Timothy Barney - 2015-04-13

In this fascinating history of Cold War cartography, Timothy Barney considers maps as central to the articulation of ideological tensions

This book gathers various perspectives on international aspirations. Barney argues that the borders, scales, projections, and other conventions of maps prescribed and constrained the means by which foreign policy elites, popular audiences, and social activists navigated conflicts between North and South, East and West. Maps also influenced how identities were formed in a world both shrunk by advancing technologies and marked by expanding and shifting geopolitical alliances and fissures. Pointing to the necessity of how politics and values were "spatialized" in recent U.S. history, Barney argues that Cold War-era maps themselves had rhetorical lives that began with their conception and production and played out in their circulation within foreign policy circles and popular media. Reflecting on the ramifications of spatial power during the period, *Mapping the Cold War* ultimately demonstrates that even in the twenty-first century, American visions of the world--and the maps that account for them--are inescapably rooted in the anxieties of that earlier era.

modern map production. Its primary focus is on the new paradigm of "sharing and reuse," which is based on decentralized, service-oriented access to spatial data sources. Service-Oriented Mapping is one of the main paradigms used to embed big data and distributed sources in modern map production, without the need to own the sources. To be stable and reliable, this architecture requires specific frameworks, tools and procedures. In addition to the technological structures, organizational aspects and geographic information system (GIS) capabilities provide powerful tools to make modern geoinformation management successful. Addressing a range of aspects, including the implementation of the semantic web in geoinformatics, using big data for geospatial visualization, standardization initiatives, and the European spatial data infrastructure, the book offers a comprehensive introduction to decentralized map production. .

Darques - 2016-09-10

This book demonstrates the pivotal role played by state confines in the geography of Balkan countries through powerful GIS and remote sensing analyses. It provides unique mapping perspectives on the Balkan region, with over 140 illustrations. The book is dedicated to applied, historical and economic geographers, as well as political scientists. Because of its high fragmentation, the Balkan area has not been studied on a systematic transnational basis. The persistence of frozen and/or open conflicts has also turned the border issue into an absolute taboo subject for the scientific community and civil society. This results in an apparent "chaos" that most Western observers fail to understand.
